TITLE : REMOTE CONTROLLER AND ITS
DISPLAY METHOD

ABSTRACT : PROBLEM TO BE SOLVED: To provide a remote controller through which the operation is conducted accurately and efficiently by displaying the relation between a current operating status of the controller and a content instructed by a user in the remote controller which is operated by a plurality of operators through a communication channel.

SOLUTION: A work station 3 controls panning, tilting, zooming, focusing and exposure or the like for a video camera 1 placed on a panning tilter 2 through a communication channel. The work station 3 connects to each personal computer 5 which is an operation terminal via an internet channel. Furthermore, a video capture board provided to the work stations 3 receives an image photographed by the video camera 1, converts the image into image data which are sent to each personal computer 5. A display device 6 connected to the personal computer 5 displays the received image, operation contents and operation results or the like, and an operator 7 observing them confirms the operation of the video camera 1 operates it.
